**9.2.1.2.4; 9.2.3.2.1;  
9C.2.1.3.6; 9C.2.1.4.1;  
9P.2.3.4.1**

**Energy**

1. Enthalpy diagrams
2. Heat and enthalpy calculations
3. Thermochemical equations
4. Energy conservation

4. Calculate changes in heat content.
5. Compare and contrast endothermic and exothermic reactions.
6. Use thermochemical equations to interpret heat loss or heat gain in a given reaction.
7. Use the law of conservation of energy to relate heat loss and heat gain in a system.
8. Describe the role of a catalyst in a chemical reaction.
9. Describe phase changes as endothermic or exothermic processes.
10. Calculate enthalpy, heat of fusion, and heat of vaporization.

Use thermochemical equations to interpret heat loss or heat gain in a given reaction.

Use the law of conservation of energy to relate heat loss and heat gain in a system.

Describe the role of a catalyst in a chemical reaction.

Describe phase changes as endothermic or exothermic processes.

Calculate enthalpy, heat of fusion, and heat of vaporization.
